

Add Movies and Sounds!

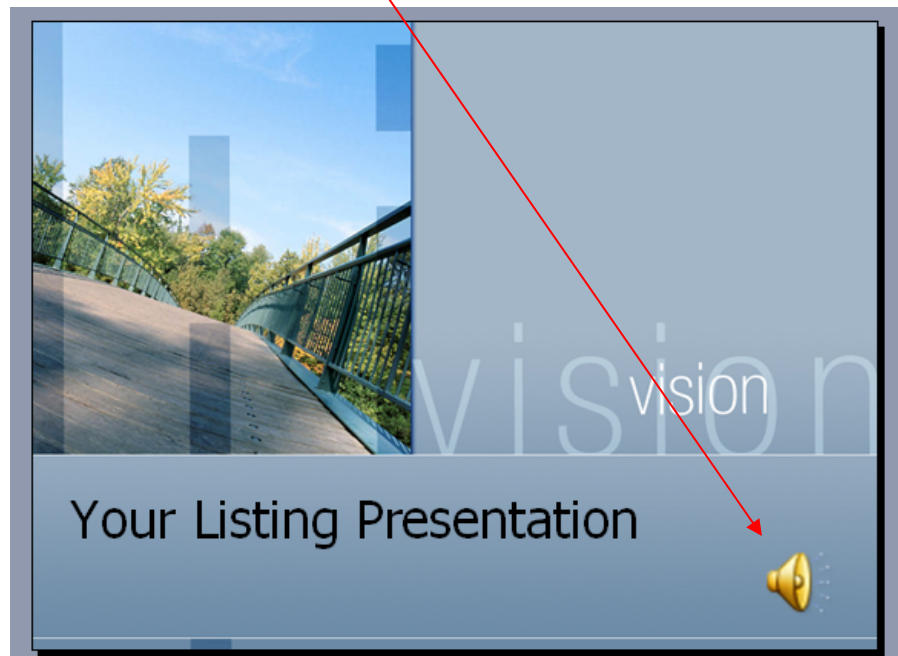

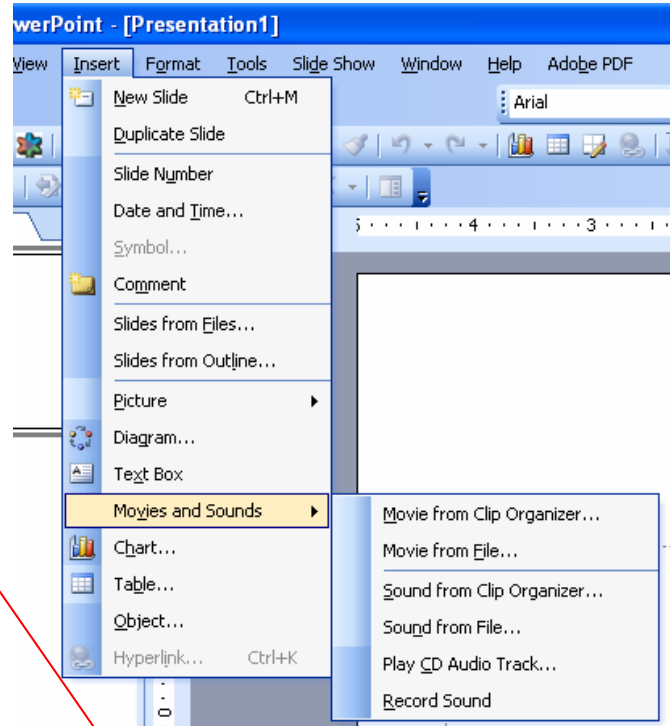

PowerPoint for Listing Presentations

Spice up any PowerPoint presentation by adding streaming video or audio files!

Once you've captured and saved a video or audio clip, you can select Insert, Movies and Sounds and then make the appropriate choice from the location menu.

You can format the video or audio to play automatically when you reach that particular slide in your presentation or you can manually activate it by clicking on the icon in the slide.

Consider the impact that your next listings presentation will have when you show prospective clients movies of listings!

Please remember not to over do it when adding video or audio files. Too many sites and sounds can be distracting during your presentation.
